

ECE 738
Special Topics in Communication Systems and Networks
Coding Theory

COURSE OUTLINE

Please refer to course website for updated information.

COURSE DESCRIPTION

The course provides an in-depth introduction to the theory of error-correcting codes. It includes both algebraic codes (e.g., Hamming, Generalized Reed-Solomon and BCH codes) as well as combinatorial codes (e.g., constant-weight codes). The course covers code construction, and fundamental bounds on code parameters. Practical aspects of code representation, finite field arithmetic, and encoding/decoding procedures, are also discussed.

SCHEDULE And MODE OF DELIVERY

One 3-hour in-person lecture per week.

INSTRUCTOR

Dr. Moshe Schwartz
Email: schwartz.moshe@mcmaster.ca
Office: ITB-A310
Office Hours: By appointment.

COURSE WEBSITE/S

<http://avenue.mcmaster.ca>

COURSE OBJECTIVES

By the end of this course, students should be able to:

- Understand basic code parameters and the trade-off between them.
- Implement encoders and decoders for common codes (Hamming, GRS, BCH)
- Come up with, and compare, various coding solutions given a data transmission/storage problem
- Start research in the area of coding theory

ASSUMED KNOWLEDGE

Basic knowledge in linear algebra.

COURSE MATERIALS

Optional course textbooks:

[1] R. M. Roth, "Introduction to Coding Theory," Cambridge University Press, UK, 2006.

[2] F. J. MacWilliams and N. J. A. Sloane, "The Theory of Error-Correcting Codes," North-Holland, Amsterdam, 1977.

COURSE OVERVIEW

Week	Topic
1	Introduction, channels, Hamming distance, block codes, minimum distance decoding, error correction, error detection, erasure correction
2	Finite groups, cosets, finite fields of prime size, review of vector spaces
3	Linear codes: definition and motivation, generator matrices, parity-check matrices, the Hamming code
4	Dual codes, syndrome decoding, the standard array method; More algebra: polynomials and irreducible polynomials, algebraic extension of fields
5	Roots of polynomials, the multiplicative/additive group of a finite field,
6	Double error-correcting codes, Bounds: Singleton, ball-packing
7	Gilbert Varshamov bound, asymptotic form of bounds
8	Generalized Reed-Solomon (GRS) codes: definition and basic properties
9	Conventional Reed-Solomon (RS) codes, decoding GRS codes and the key equation
10	Concatenated codes, alternant/BCH codes as sub-codes of GRS codes; More algebra: minimal polynomials
11	Cyclic codes and their properties, RS/BCH codes are cyclic, the BCH bound
12	Non-linear codes: motivation, constant-weight codes and Steiner systems
13	The Johnson bound for constant-weight codes, the Johnson bound for non-constant-weight codes

At certain points in the course it may make good sense to modify the schedule. The instructor may modify elements of the course and will notify students accordingly (in class, on the course website).

ASSESSMENT

Component	Weight
Assignments (4 x 25%)	100%
Total	100%

CONDUCT EXPECTATIONS

As a McMaster graduate student, you have the right to experience, and the responsibility to demonstrate, respectful and dignified interactions within all of our living, learning and working

communities. These expectations are described in the [Code of Student Rights & Responsibilities](#) (the “Code”). All students share the responsibility of maintaining a positive environment for the academic and personal growth of all McMaster community members, **whether in person or online.**

It is essential that students be mindful of their interactions online, as the Code remains in effect in virtual learning environments. The Code applies to any interactions that adversely affect, disrupt, or interfere with reasonable participation in University activities. Student disruptions or behaviours that interfere with university functions on online platforms (e.g. use of Avenue 2 Learn, WebEx or Zoom for delivery), will be taken very seriously and will be investigated. Outcomes may include restriction or removal of the involved students’ access to these platforms.

COPYRIGHT AND RECORDING

Students are advised that lectures, demonstrations, performances, and any other course material provided by an instructor include copyright protected works. The Copyright Act and copyright law protect every original literary, dramatic, musical and artistic work, **including lectures** by University instructors.

The recording of lectures, tutorials, or other methods of instruction may occur during a course. Recording may be done by either the instructor for the purpose of authorized distribution, or by a student for the purpose of personal study. Students should be aware that their voice and/or image may be recorded by others during the class. Please speak with the instructor if this is a concern for you.

ACADEMIC ACCOMMODATIONS OF STUDENTS WITH DISABILITIES

Students with disabilities who require academic accommodation must contact [Student Accessibility Services](#) (SAS) at 905-525-9140 ext. 28652 or sas@mcmaster.ca to make arrangements with a Program Coordinator. For further information, consult McMaster University’s [Academic Accommodation of Students with Disabilities](#) policy.

ACADEMIC ACCOMMODATION FOR RELIGIOUS, INDIGENOUS OR SPIRITUAL OBSERVANCES (RISO)

Students requiring academic accommodation based on religious, indigenous or spiritual observances should follow the procedures set out in the [RISO](#) policy. Students should submit their request to their Faculty Office **normally within 10 working days** of the beginning of term in which they anticipate a need for accommodation or to the Registrar's Office prior to their examinations. Students should also contact their instructors as soon as possible to make alternative arrangements for classes, assignments, and tests.

EXTREME CIRCUMSTANCES

The University reserves the right to change the dates and deadlines for any or all courses in extreme circumstances (e.g., severe weather, labour disruptions, etc.). Changes will be communicated through regular McMaster communication channels, such as McMaster Daily News, A2L and/or McMaster email.

RESEARCH ETHICS

The two principles underlying integrity in research in a university setting are these: a researcher must be honest in proposing, seeking support for, conducting, and reporting research; a researcher must respect the rights of others in these activities. Any departure from these principles will diminish the integrity of the research enterprise. This policy applies to all those conducting research at or under the aegis of McMaster University. It is incumbent upon all members of the university community to practice and to promote ethical behaviour. To see the Policy on Research Ethics at McMaster University, please go to <http://www.mcmaster.ca/policy/faculty/Conduct/ResearchEthicsPolicy.pdf>.
