Overview of Interfacing with Arduino and Raspberry Pi

This information session provides an overview of the Raspberry Pi and Arduino. Become familiar with the similarities and differences of these two devices. See examples of how to interface with these devices using physical controls or software interfaces. Discover extra attachments available to improve the functionality of these devices. Get ideas and inspiration for upcoming projects.

Biography:

Eric Mahoney is a PhD candidate at McMaster University in the School of Biomedical Engineering. He is currently working on an internship at Trojan Technologies in London ON in Photonics Research. Research interests include development of optical sensors for water quality monitoring, and development of UV disinfection systems.
