Ranked as one of the world’s top engineering schools, the Faculty of Engineering plays a significant role in helping McMaster University earn its reputation as one of Canada’s most innovative universities.

Our focus on experiential, problem-based learning and our interdisciplinary approach to collaboration results in smarter insights, groundbreaking ideas, and greater optimism. This approach is helping us create a brighter world.

#1 MOST RESEARCH INTENSIVE University in Canada

$41.8M in external research funding awarded to engineering students

7 DISCIPLINES in the TOP 150 Engineering Programs Internationally

(2018) Shanghai Ranking’s Global Ranking of Academic Subjects

“McMaster Engineering is ranked among the top programs in the world. We foster a love of learning and sense of personal dedication to excellence within a broader societal context of engineering. Our students are motivated and inspired to become engaged citizen scholars who will transform the world.”

Ishwar K. Puri
Dean, Faculty of Engineering

“At McMaster Engineering, we value our strong sense of community that bring together graduate students and professors to find solutions to many pressing global challenges.”

Michael Thompson
Associate Dean, Graduate Studies
Faculty of Engineering

**McMaster teaching method + facilities**

**Award-Winning Faculty**
McMaster is dedicated to teaching, learning, and service. In the 1960s, we pioneered the “problem-based” approach to learning that came to be known around the world as “the McMaster model”. Through this active, problem-based learning style, students become proactive thinkers with excellent critical thinking, problem-solving, and self-directed learning skills.

**Fostering Engineering Innovation**
The Government of Canada and the Province of Ontario are investing $43M, the single largest government investment in laboratories and research capacity expansion in McMaster’s history. The funding is part of a massive $75M project that will support the renovation and retrofit of existing labs in the Arthur E. Bourns Building, and the construction of a new innovation tower.

**McMaster wins Global Teaching Excellence Award**
McMaster has won the prestigious Global Teaching Excellence Award based on the strength of its experiential learning opportunities, a commitment to global engagement and the work of the Paul Pherson Institute for Leadership, Innovation and Excellence in Teaching.

**World-Class Facilities**
The Faculty of Engineering is home to 20 major research centres and institutes that house world-class equipment, which are operated by leading experts in their fields. Our students are trained in these facilities, which enables them to enter the workforce with expertise in the latest technologies. In keeping with our collaborative approach, our facilities are also used by faculty members across the University, by government, and the private sector. Our researchers and students also have access to other research centres and institutes across the University, such as the Nuclear Reactor, Brockhouse Institute for Materials Research, and the Brain-Body Institute.

**McMaster Automotive Resource Centre**
MARC houses industry-scale labs, classrooms, and equipment to prototype vehicles of the future. Both academic and industry organizations, from OEMs to parts suppliers to start-ups, have access to MARC to pursue market-oriented research and development.

"McMaster is among very few universities worldwide equipped to design and build a vehicle from the ground up, right on campus," says Ali Emadi, Canada Excellence Research Chair Hybrid Powertrain, and Director, MacAUTO. "This capacity, combined with a diverse range of research and teaching expertise, will enable us to develop the next generation of smart, sustainable transportation, one that replaces fossil fuels with electrification. It will create new technologies, new industries and transform how people and goods are moved."

*Facing page: Rendering of the innovation tower which is scheduled to open in 2018/19. Image courtesy of 2AS Architects + Interiors.

**The Canadian Centre for Electron Microscopy (CCEM) provides world-class electron microscopy capabilities for materials physics, nanomedicine and metallurgy research.**

* 37 universities from around the world, as well as industry, perform research in CCEM

Co-op

Co-op will enable students to establish a network of industry contacts, and develop a range of valuable skills, which will aid them in their graduate studies and future careers. A term of work experience is a great addition to students’ master’s or doctoral studies. Students benefit by gaining valuable industry experience with leading engineering employers. Employers benefit by having access to a highly qualified talent pool of graduate students eager to put theory into practice.

Research & Co-op

Participating in the co-op option can be a great way to integrate the knowledge students have gained in the lab and apply it in an industrial setting. Alternatively, knowledge acquired while on a co-op work term can inform and enhance a student’s research.

“Co-op experience is important because it’s a foot in the door within a company. The company may want to hire you afterwards – they wanted to hire me. It’s hard, especially in today’s market to get a job after graduation. Everyone is always struggling and you can see it in their faces. Having co-op experience makes you much more competitive.”

Mike Chatzidakis
Second Year Masters Student
Materials Science & Engineering

Industrial PhD

Earn a Ph.D. while continuing to work full-time
Strategic benefits for companies and research institutes
Applicants must hold a research-based Masters degree in a STEM discipline

Career Services

Workshops

Career and professional development workshops are held throughout the year on a variety of topics. Past workshops have included:
- Cover Letter & Resume Writing
- Effective Job Search Strategies
- Creating and Using LinkedIn in a Job Search
- Interview Preparation (including mock interviews with industry)
- How to Negotiate a Job Offer

Industry often participate and/or lead these workshops giving students an opportunity to network with employers.

Coaching

Our Career Development and Relationship Manager establishes strong relationships with top engineering employers, facilitates connections between students and employers, provides career-planning tools and resources, and provides opportunities for graduate students to gain industry experience while pursuing their degrees. Co-op eligibility is dependent on permission from the student’s research supervisor.

METRIC

The Engineering Graduate Society (EGS) plans an annual conference which provides an opportunity for graduate students, postdocs, professors and industrial alumni in different engineering fields to engage, share ideas, develop collaboration strategies and share information about resources. Students participate as an attendee, presenter or showcase their research.

Professional Skills Development Portal

McMaster Engineering graduate students access both online and in-class professional development and career modules that educate them about the job market, facilitate students’ readiness to enter these arenas post-graduation, and give them access to Masters/PhD specific job opportunities and events.

McMaster Engineering’s Graduate Co-op and Career Services

McMaster Engineering graduate students pursue specialized knowledge, collaborate with industry and research organizations on real-world projects, and gain access to expertise, funding and state-of-the-art facilities. All graduate students participate in professional planning sessions to develop career plans which are followed up on by their faculty advisors, with the option of receiving mentoring from industry partners.
“James Street North is percolating with a vibrant art scene, inventive farm-to-table restaurants, edgy start-ups and cool shops.”

Hamilton
ONTARIO, CANADA

We are less than an hour’s drive from the United States border and only 45 minutes from Toronto, Niagara Falls, Waterloo, and Guelph. An on-campus GO Bus Terminal allows students to commute easily from the Greater Toronto Area.

FOOD
From restaurants ranked among the best in Canada to a vibrant food-truck scene, Hamilton’s appetite for all things delicious knows no limits. International eateries, unique culinary events, and a growing craft beer scene completes the picture.

MUSIC
No matter your musical taste, Hamilton delivers from local clubs hosting hot bands to classical orchestras.

NATURE
Natural beauty abounds throughout the city, including McMaster University’s own backyard, which obuts the Royal Botanical Gardens and includes several hiking trails.

CULTURE
The arts scene is booming in Hamilton from local art galleries and studios to the monthly James Street North Art Crawl and annual Supercrawl event, which attracts thousands of visitors each year.

HISTORY & HERITAGE
Distinctive architecture, world-class museums and 15 National Historic Sites offer a glimpse into the city’s past and make Hamilton the fascinating community it is today.

SPORTS
Whether you love to bike, hike, or play organized sports, Hamilton has got it all. The city is also home to the CFL’s Hamilton Tiger-Cats and other sports teams.

A 10-minute walk from campus, Westdale Village is the hub for student off campus living.
McMaster houses one of the most distinguished and research-intensive chemical engineering departments in Canada. Four of the 20 chemical engineers selected by the Canadian Society for Chemical Engineering for making the greatest contributions to chemical engineering in Canada in the 20th century were professors at McMaster’s Faculty of Engineering.

### Areas of Research

**BIOMATERIALS AND BIOPROCESSING**
- Drug delivery, tissue engineering, biocompatible surfaces, bioseparations, membranes, bioreactors, pharmaceutical processing

**POLYMER SCIENCE AND ENGINEERING**
- Polymer synthesis and characterization, polymer reaction engineering, polymer and particulate processing, paper chemistry, nanotechnology, interfacial engineering

**PROCESS SYSTEMS ENGINEERING AND CONTROL**
- Process systems design, process control, optimization, supply chain planning and scheduling, process fault detection and recovery

**MATERIALS AND PROCESS MODELING AND COMPUTATION**
- Molecular modeling, computational fluid dynamics, energy systems, alternative fuels/energy, wastewater treatment, life cycle analysis

McMaster is engaged in leading edge chemical engineering research and has concentrated research groups that collaborate with international industrial sponsors including:

- Centre for Advanced Ophthalmic Materials (Insight)
- Centre for Advanced Polymer Processing & Design (CAPPA-D)
- Centre for Pulp and Paper Research
- Interfacial Technologies Group
- McMaster Advanced Control Consortium

“McMaster is engaged in leading edge chemical engineering research and has concentrated research groups that collaborate with international industrial sponsors including:”

“I want to create job-ready employees for future jobs, not just for jobs that are available now.”

Flash floods. Blackouts. Data breaches. How can society better respond to disasters? Wael El-Dakhakhni is currently working on tools that will help a wide range of stakeholders anticipate, and even prevent disasters from happening. He inspires his students to have similar engineering ambitions by helping them link their education to real societal challenges and by encouraging them to develop their interpersonal skills.

Wael El-Dakhakhni
Director, McMaster Institute for Multi-hazard Systemic Risk Studies (INTERFACE)
Professor, Civil Engineering

“The people here are just as nice as at home and I really appreciated that because it was my first time really picking up and moving really far from home. I felt very welcomed by all the students and staff.”

Bryanna Noade
MASc candidate, Civil Engineering

Ranked as one of the top three civil engineering programs in Canada and top 30 worldwide, we are a vibrant multi-disciplinary research-intensive department focused on building healthier communities to create a brighter world. Our strong linkages with industry are evident by our six research chairs and strong record of successful application-based research funding. Our laboratory facilities allow us to conduct world-class research supported by multiple research centres, networks and institutes.

Civil Engineering

Degrees Offered: MEng, MASc, PhD
Entry Dates: September, January
Admission Requirements: see page 31
Study Options: Full- or part-time for all degrees offered

McMaster is engaged in leading edge research in the field of civil engineering and has concentrated research groups that collaborate with international industrial sponsors including:

• Centre for Effective Design of Structures
• McMaster Interface Institute
• McMaster Institute for Transportation and Logistics
• McMaster Water Network

Areas of Research

RESILIENT INFRASTRUCTURE SYSTEMS
Extreme natural and man-made hazards, risk assessment and performance/resilience based design, large-scale testing and hybrid simulation, multi-hazard hazard simulation and mitigation

SMARTER MOBILITY
Connected and autonomous vehicles; smart cities; cyber-physical systems for transportation; transit design, operation, and management; transportation safety; transportation data analytics

WATER SECURITY AND CLIMATE CHANGE
Flood simulation, prediction and risk under climate change, fate and transport of pathogens and heavy metals in ground water systems and impact on the environment and human health, flow of contaminated water in fractured rock systems, systemic risk of fracking on ground water aquifers

INTELLIGENT ENERGY SYSTEMS
Power grid simulation and optimization, building energy consumption and automation, systemic risk posed by and on energy networks, energy linkage to water systems, renewable energy; energy production resilience and sustainability under climate change
“It was an “aha” moment. I can use all my passions and leverage them when I program. I can make programs and different applications in software for any number of domains.”

Monika Jaskolka
PhD candidate, Software Engineering

“Making connections with industry gives students the opportunity to address industry challenges now.”

Fei Chiang is building software tools to automate and improve data quality so that users can spend more time and resources on data analysis and decision-making. Chiang and her research group work with prominent industry partners such as IBM to improve their data quality. “Making connections with industry gives students the opportunity to address industry challenges now.”

Fei Chiang
Assistant Professor, Computing and Software

McMaster’s Department of Computing and Software advances the field of computing through education and research. We focus on computing research problems that involve scientific theory, engineering practice, and the interface between the two. We seek to address society’s need for better methods of developing information systems and dependable, safe, secure, high-quality software.

McMaster’s Department of Computing and Software advances the field of computing through education and research. We focus on computing research problems that involve scientific theory, engineering practice, and the interface between the two. We seek to address society’s need for better methods of developing information systems and dependable, safe, secure, high-quality software.

SCHOOL OF ENGINEERING AND APPLIED SCIENCE
Computing & Software

Degrees offered: MEng, MSc, MASc, PhD
Entry Dates: September, January, May
Admission Requirements: see page 31
Study Options: Full- or part-time for all degrees offered

McMaster’s Department of Computing and Software advances the field of computing through education and research. We focus on computing research problems that involve scientific theory, engineering practice, and the interface between the two. We seek to address society’s need for better methods of developing information systems and dependable, safe, secure, high-quality software.

Areas of Research

COMPUTER SYSTEMS
Operating systems, systems architecture and hardware, data storage and management systems, distributed systems, and computer networks.

HEALTH INFORMATICS AND BIOINFORMATICS
Information technology, health care delivery, biomedicine, biological processes, medical software and devices.

SCIENTIFIC COMPUTING AND OPTIMIZATION
Quantitative modelling and analysis, optimal allocations of resources, scheduling tasks and designing prototypes.

SECURITY, PRIVACY, AND DATA ANALYTICS
Cryptographic algorithms and protocols, data cleaning and curation solutions, privacy governance and preserving tools, and anomaly detection techniques.

SOFTWARE QUALITY
Multicore concurrency; Software Engineering approaches to Scientific Computation; Domain Specific Languages; Generative Programming specifically; and Model-Driven Engineering of Cyber-Physical Systems in general; and the Development and Certification of Safety-Critical Systems.

THEORY AND METHODOLOGIES OF COMPUTATION
Theoretical computer science, foundations of software engineering, applications to knowledge representation and synthesis of software from mathematical specifications.
“There has to be a mentor who students can look up to – someone to meet with weekly, to show the little tricks of the profession. Someone who will lean over the equipment to show how it works.”

Natalia Nikolova believes in the power of mentorship. To help her students succeed, she makes sure to devote as much time as possible to each of them. Using radar technology, Nikolova and her team are developing a scanner for early stage breast cancer detection and a fully automated, concealed weapon detection system.

Natalia K. Nikolova
Canada Research Chair in High-frequency Electromagnetics
Professor, Electrical and Computer Engineering

McMaster’s Department of Electrical & Computer Engineering is home to The Centre for Research in Micro- and Nano-systems, a unique facility in North America offering fabrication, characterization and integration of different materials, components and devices at multiple length scales. For example, Nano-Bonding and –Interconnect System (NBIS) and Nanoimprinting Lithography System (NIL) provide fabrication and integration of nanometer scale structures and devices. Research using MNSL infrastructure spans from fundamental areas such as molecular interactions during bonding to applied relating to miniaturization of emerging systems for health and environmental applications.

Natalia K. Nikolova
Canada Research Chair in High-frequency Electromagnetics
Professor, Electrical and Computer Engineering

“There is a wide range of career opportunities, especially for engineers in Ontario. Many of my friends are coming to Ontario to find careers here.”

Mahsa Salmani
PhD candidate, Electrical and Computer Engineering

SCHOOL OF ENGINEERING AND APPLIED SCIENCE

Electrical & Computer Engineering

Degrees offered: MEng, MAEng, PhD
Entry Dates: September, January, May
Admission Requirements: see page 31
Study Options: Full- or part-time for all degrees offered

McMaster’s Electrical and Computer Engineering department is ranked as one of the best departments of electrical and computer engineering both nationally and internationally. Faculty members are regular award winners including the prestigious Premier Research Excellence Award (PREA), OCUFA teaching award, McMaster Students Union Teaching Award, Booker Gold Medal, and the Signal Processing Society Education Award.

Areas of Research

**BIOMEDICAL TECHNOLOGIES**
Neural prostheses, medical robotics, medical imaging technologies, biomedical sensors, hearing aids, brain-computer interfaces.

**COMMUNICATION TECHNOLOGIES, SYSTEMS & NETWORKS**
Theory, algorithms and implementations of communication networks: wireline, optical fibre, wireless, mobile and wireless optical; multimedia communications; cloud computing.

**ELECTRIFIED & AUTONOMOUS TRANSPORTATION**
Hybrid & electric powertrain design & control, estimation & tracking for autonomous control, electric motor drives.

**ELECTROMAGNETICS & PHOTONICS**
Electromagnetic imaging & detection with applications in biomedicine and security, radar scattering, antennas, semiconductor laser diodes, integration of photonic devices.

**INTEGRATED, EMBEDDED AND INTERCONNECTED SYSTEMS**
Hardware/software co-synthesis, low power & reliable computing, Internet of Things, telesurgery, smart grid.

**MICROELECTRONICS & VLSI**
Microelectronic characterization & modelling, nanoelectronics, ultra-low power integrated circuits, computer-aided design of VLSI circuits

**OPTIMIZATION, LEARNING & CONTROL**
Optimization for engineering design, machine learning, data fusion, aerial robotics, haptic control.

**POWER ELECTRONICS & ELECTRIC MACHINES**
Power electronic converters, electric machines & energy conversion systems, renewable energy systems.

**SIGNAL, IMAGE & VIDEO PROCESSING**
Detection and estimation, information and coding theory, video display technologies, multimedia signal processing, data compression, biomedical signal processing.

McMaster’s Department of Electrical & Computer Engineering is home to The Centre for Research in Micro- and Nano-systems, a unique facility in North America offering fabrication, characterization and integration of different materials, components and devices at multiple length scales. For example, Nano-Bonding and –Interconnect System (NBIS) and Nanoimprinting Lithography System (NIL) provide fabrication and integration of nanometer scale structures and devices. Research using MNSL infrastructure spans from fundamental areas such as molecular interactions during bonding to applied relating to miniaturization of emerging systems for health and environmental applications.
“Every time I achieve a goal and get one step closer to a working device, I get a little motivation boost because I know that this could be a technology that could have real world applications.”

Simon McNamee
MEng candidate, Physics

SCHOOL OF ENGINEERING AND APPLIED SCIENCE

Engineering Physics

Degrees Offered: MEng, MASc, PhD
Entry Dates: September, January, May
Admission Requirements: see page 31
Study Options: Full- or part-time for all degrees offered

Engineering Physics at McMaster is pushing the forefront of modern physics to better the world through technological advancement. We are solving the grand challenges of the future such as energy supply, human health, digital information and communications technology, and renewable energy.

Areas of Research

BIOMEDICAL ENGINEERING
- Biosensors, biophotonics

NUCLEAR ENGINEERING AND ENERGY SYSTEMS
- Intense positron beam used to probe defects in materials; investigation of irradiated materials from nuclear power reactors; nuclear safety analysis, nuclear fuel and waste management, nuclear physics

NANOTECHNOLOGY, NANO- AND MICRO-DEVICE ENGINEERING
- Micro-electro-mechanical systems (MEMS), photovoltaics, organic electronics, optoelectronics, III-V materials and devices

PHOTONICS ENGINEERING
- Silicon photonics, displays, laser applications, sensors, ultrafast lasers

Leyla Soleymani is developing biosensors, miniature devices that can be used at point of care to quickly and accurately diagnose certain types of cancer and infectious diseases. This low-cost technology will help improve healthcare services for people around the world. Soleymani says a key to her success is her passion for her research and she hopes to convey that passion to her students.

Leyla Soleymani
Canada Research Chair in Miniaturized Biomedical Devices
Associate Professor, Engineering Physics
“I want to showcase that we’re doing exciting research here and I want to show the many avenues you can pursue in a research career.”

Using high-powered microscopes, Kathryn Grandfield looks at how materials for joint replacement and dental implants attach to human tissue to create better quality devices that last longer inside the body. Grandfield credits her professors for helping to shape her future. She strives to do the same for her students.

Kathryn Grandfield
Assistant Professor,
Materials Science and Engineering

“The moment I arrived at the airport, I realized everyone is so friendly and I didn’t feel like I was someone from outside. I felt that I belonged here and that this was the place I can live in and progress in my work.”

Shooka Mahboubi
PhD candidate, Materials Science and Engineering

McMaster is engaged in leading edge material science and engineering research and has concentrated research groups that collaborate with international industrial sponsors including:

- Canadian Centre for Electron Microscopy
- Steel Research Centre
- Centre for Automotive Materials and Corrosion

**Areas of Research**

**STRUCTURAL MATERIALS PROCESSING AND PROPERTIES**
High strength steels, aluminium alloys, magnesium alloys, casting, heat treating, thermomechanical processing, galvanizing, plastic deformation, fracture, fatigue, corrosion, multi-scale modelling

**FUNCTIONAL MATERIALS**
Electronic materials, magnetic materials, electrocatalysts, supercapacitors

**NANOTECHNOLOGY AND NANO-SCALE MATERIAL SCIENCE**
Energy materials (batteries and fuel cells), nanophotonics, 2-D materials, modelling, atomic-scale characterization

**BIOMATERIALS**
Ossesintegration, bone applications in dentistry and orthopaedics, biomimelalation

**Materials Science & Engineering**

**Degrees Offered:** MSc, MASc, PhD

**Entry Dates:** September, January, May

**Admission Requirements:** see page 31

**Study Options:** Full- or part-time for all degrees offered

Building strategically on our diverse expertise in materials, in collaboration with local and global partners, the Department of Materials Science and Engineering here at McMaster University is internationally recognized as a destination of choice, where students, scholars, alumni and employers partner in a journey of learning, discovery and innovation.
“The McMaster mentorship experience is more like a partnership. That’s why I chose Mac to pursue my graduate studies. Professors are excited with what you’re doing and they want to be a part of what you’re doing.”

Ryan Rogers
MASc candidate, Mechanical Engineering

STEPHEN VELDHUIS
Director, McMaster Manufacturing Research Institute
Professor, Mechanical Engineering

Our research is heavily supported by industry and is in areas of strategic interest including hybrid vehicles, energy and environment, sustainable energy, biomechanics, materials and manufacturing, MEMS and mechatronics. Our cluster of research groups include:

- Centre for Advanced Micro Electro-Fluidics
- Computational Fluid Dynamics laboratory
- Flow-Induced Vibration and Aeroacoustics Laboratory
- Light Metal Casting Research Centre
- Machining Systems Laboratory
- McMaster Automotive Research Centre
- McMaster Manufacturing Research Institute
- McMaster Mechatronics Research Group
- Metal Forming Laboratory
- Micro-Machining Laboratory
- Robotics and Manufacturing Automation Research
- Thermal Management Research Laboratory
- Thermal Processing Laboratory

Areas of Research

BIOMECHANICS
Biomechanics of Musculoskeletal Systems, Bone Adaptation to Mechanical Stimuli & Injury, Surgical Robotics, Bone Fracture Limits & Injury Tolerance, Design of Artificial Joint Replacements, Surrogates for Biomechanical Research, Bio-Functional Interfaces, Biomaterials & Biosensors, Cardiovascular Mechanics, Medical Imaging

MANUFACTURING
Casting, Computer Aided Manufacturing, Electrical Discharge Machining, Grinding, Machining of Advanced Materials, Machining Processes and Systems, Materials Processing and Systems, Manufacturing Automation, Manufacturing Processes and Systems, Metal Forming, Cutting and Removal, Metallic and Non-Metallic Coatings for Advanced Steels, Process Modelling & Simulation, Robotics

MECHANICS & DESIGN
Automotive Applications, Computer aided design, Control Systems, Dynamics and Vibrations, Finite Element Analysis, Flow Induced Vibration and Noise, Hybrid Vehicles, Materials and Microstructural Engineering, Mechatronics, Microelectromechanical (MEMS) Devices, Product Design and Manufacturing, Robotics, Theoretical mechanics

THERMAL FLUID SCIENCES

SCHOOL OF ENGINEERING AND APPLIED SCIENCE

Mechanical Engineering

Degrees Offered: MEng (ADMII), MASc, PhD
Entry Dates: September, January, May
Admission Requirements: see page 31
Study Options: Full- or part-time for all degrees offered

The Department of Mechanical Engineering is the second largest department in the Faculty of Engineering at McMaster University. The research funding per faculty member is amongst the highest in the country and the Department benefits from state of the art laboratories with established international reputations.

“Being able to apply our knowledge and make improvements in industry is what we strive to do. Engaging students on improving productivity, helping a company earn new business and keeping jobs – this is a nice package of everything coming together.”

Having an impact on peoples’ lives is what drives Stephen Veldhuis’ research. Veldhuis’ research is focused on tribology, the study of friction and wear, which contributes to the development of high performance manufacturing solutions.
“Being from an engineering background gives me the skills to be able to contribute to the ever-changing world of healthcare through innovation and unique problem solving.”

Mandakini Jain
MASc candidate, Biomedical Engineering

School of Biomedical Engineering

Degrees Offered: MASc, PhD, MD / PhD
Entry Dates: September, January, May
Admission Requirements: see page 31
Study Options: Full- or part-time for all degrees offered

McMaster’s Faculty of Engineering and Faculty of Health Sciences have partnered to create a unique research and training program under the umbrella of the School of Biomedical Engineering.

The School provides a unique collaborative environment that leverages our existing expertise in medical sciences and engineering, and that links current and emerging areas of molecular, medical and bioengineering research. We invite you to join us in pushing the boundaries of discovery and improving the lives of future generations through the seamless merging of the human with the human-made.

Our goal is to leverage McMaster’s internationally recognized strengths and resources toward the development of new approaches in biomedical science and technology, through both fundamental and more goal oriented translational research programs.

McMaster’s Faculty of Engineering and Faculty of Health Sciences have partnered to create a unique research and training program under the umbrella of the School of Biomedical Engineering.

The School provides a unique collaborative environment that leverages our existing expertise in medical sciences and engineering, and that links current and emerging areas of molecular, medical and bioengineering research. We invite you to join us in pushing the boundaries of discovery and improving the lives of future generations through the seamless merging of the human with the human-made.

Our goal is to leverage McMaster’s internationally recognized strengths and resources toward the development of new approaches in biomedical science and technology, through both fundamental and more goal oriented translational research programs.

McMaster’s School of Biomedical Engineering is home to various research centres including:

- Antimicrobial Research Centre
- Brockhouse Institute for Materials Research
- Centre for Emerging Device Technologies
- Centre for Minimal Access Surgery
- Juravinski Cancer Centre
- McMaster Institute for Applied Radiation Sciences
- McMaster Manufacturing Research Institute
- Thrombosis and Atherosclerosis Research Institute

Areas of Research

BIOMATERIALS AND DEVICES
Biomaterials and tissue engineering directed towards growth or regeneration of cells, tissues and organs. The technology includes development of biomaterials, implantable devices and sensors and other biologically compatible materials with applications in numerous medical devices and therapies.

IMAGING, SENSING AND DETECTION
Development and application of imaging technologies applicable to cells, tissues, organs and the brain for diagnostic and therapeutic purposes.

THERAPEUTICS
Research toward the development of novel drugs and drug delivery methods, including the development of biodegradable polymers and other materials for tissue engineering of cellular scaffold and release of signaling molecules.

“I know my students are ready to leave the nest when they start to teach me. When they teach me, they’re ready fly.”

Dr. Michael Noseworthy and his research team are building new hardware and software to improve imaging technology. He uses a high-powered magnetic resonance imaging (MRI) scanner to gain a more in-depth understanding of how the mind, brain and body work together to influence health and disease.

Michael Noseworthy
Professor, Electrical and Computer Engineering

“Being from an engineering background gives me the skills to be able to contribute to the ever-changing world of healthcare through innovation and unique problem solving.”

Mandakini Jain
MASc candidate, Biomedical Engineering

School of Biomedical Engineering

Degrees Offered: MASc, PhD, MD / PhD
Entry Dates: September, January, May
Admission Requirements: see page 31
Study Options: Full- or part-time for all degrees offered

McMaster’s Faculty of Engineering and Faculty of Health Sciences have partnered to create a unique research and training program under the umbrella of the School of Biomedical Engineering.

The School provides a unique collaborative environment that leverages our existing expertise in medical sciences and engineering, and that links current and emerging areas of molecular, medical and bioengineering research. We invite you to join us in pushing the boundaries of discovery and improving the lives of future generations through the seamless merging of the human with the human-made.

Our goal is to leverage McMaster’s internationally recognized strengths and resources toward the development of new approaches in biomedical science and technology, through both fundamental and more goal oriented translational research programs.

“The faculty are all practitioners and industry people who became academics so they bring this practicality to everything that we’re doing.”

Christopher Boothe
Master of Engineering and Public Policy candidate,
W Booth School of Engineering Practice and Technology

W Booth School of Engineering Practice & Technology

Degrees Offered: MEng Design, MEPP, MTEI, MEEI, MEME, MS & T (pending approval)
Entry Dates: Varies by degree
Study Options: Varies by degree

Students become innovative problem solvers and lead creations of sustainable solutions in the connected world. They focus on innovation in the early stages of design, smart systems (automation, robotics, AI, augmented reality), and advanced manufacturing. Students are also intricately involved in entrepreneurship for start-up companies and development of engineering based policy decisions. Our innovative graduate programs combine in-depth technical expertise with project management and communication skills, positioning students to become leaders in their field.

Applying industry skills in community based projects, internships, and co-op help our students expand their network of contacts.

FIVE MASTER’S DEGREE PROGRAMS AVAILABLE:
• Engineering and Public Policy
• Engineering Design
• Entrepreneurship and Innovation
• Manufacturing Engineering
• Systems and Technology

92% of our alumni are employed in their field within 6 months of graduating
10% of our alumni currently work at the executive level (CIO, CFO, CEO, President, etc.) or are founders of their own companies.

Master of Systems and Technology
Approval pending for Sept. 2019 start

Plug yourself into smart systems (cyber-physical systems) which are changing the way we live and work. Tailor your learning portfolio to your career aspirations by selecting courses ranging from smart systems infrastructure (e.g. industrial networks) to domain specific courses in advanced manufacturing, automotive or automation. Specialize in areas such as: artificial intelligence (machine learning, deep neural networks), augmented reality / virtual reality.

Master of Engineering Design

Students focus on the early stages of the design process in order to create maximum value for companies across all branches of industry. They prototype designs as physical objects or virtual reality / augmented reality images. Moreover, they create value through a “design thinking” approach, by learn methodologies to identify and analyze unmet needs and design products or services for users.

Specialize in one of these focus areas:
- Process and Production Systems
- Product Design (including VR/AR)
- Sustainable Community Infrastructure

Admission Start Date FT Length PT Length
STEM Degree; B- average in last 10 technical courses September (all streams) or January (product design and process systems only) 12 months 28 months

Applicants who did not attain the required standing in their undergraduate degree, but who have at least four years of relevant work experience may be considered.

Master of Engineering and Public Policy

Students in the Engineering and Public Policy program become integrative problem solvers, armed with the interdisciplinary skills to find solutions that can balance competing societal needs.

- As researchers and policy makers, graduate work in both the public and private sectors to drive decision-making.
- Using the skills learned through interdisciplinary course work, as well as real-world experience gained while working with community partners to complete your research, you’ll be ready to make a difference in your chosen career.

Admission Start Date FT Length PT Length
STEM Degree; B- average in last 10 technical courses September or January 12 months 28 months

Applicants who did not attain the required standing in their undergraduate degree, but who have at least four years of relevant work experience may be considered.

Master of Engineering Entrepreneurship and Innovation / Master of Technology Entrepreneurship and Innovation

So you want to be an entrepreneur?

Kick-off your own hi-tech start-up while earning a Master’s degree in a globally recognized, award-winning program.

At the same time, you will learn tools and concepts for creating a new business using an industry-proven process. While starting your business, our network of seasoned mentors will help you to translate your novel idea into a commercial innovation.

You will gain innovation and entrepreneurial skills that will help you professionally, no matter where your career is headed.

Admission Start Date FT Length PT Length
Degree Admission Start Date FT Length
Engineering Entrepreneurship and Innovation STEM Degree; B- average in last 10 technical courses September 20 months
Technology Entrepreneurship and Innovation Degree from any discipline, with evidence of ability to successfully complete technical courses; B- average in final year September 20 months

While students in the Master of Technology program are not expected to have any engineering or scientific background, they must embrace creativity and innovation. Familiarity with technology is expected, but the required technological depth will depend on the student’s chosen project.

Master of Engineering – Manufacturing Engineering

With a focus on Industry 4.0, you will focus on how to create, regulate, protect, and improve networked manufacturing systems for the purpose of developing “smarter” and more sustainable engineering and business processes.

You will work with an industry partner and academic mentor to complete a real-world project (of your choosing and design) focusing on one of the following three areas:
- Advanced Manufacturing
- Automotive
- Automation and Smart Systems

Admission Start Date FT Length PT Length
Degree Admission Start Date FT Length
Engineering Degree; B- average in Degree September or January 12 months 24 months project based/ 28 months course based

Applicants who did not attain the required standing in their undergraduate degree, but who have at least four years of relevant work experience may be considered.
Apply today!

**STEP 1**
**PREPARE YOUR APPLICATION**
Gather required documents such as official transcripts, academic references, language proficiency examination scores, statement of interest. Refer to McMaster’s Graduate Academic calendar for details.

**STEP 2**
**APPLY ONLINE**
Apply through McMaster’s Faculty of Graduate Studies online application system.

**STEP 3**
**CHECK YOUR APPLICATION STATUS**
Login to your McMaster Mosaic account to check your application status at anytime.

**STEP 4**
**RECEIVED AN OFFER OF ADMISSION?**
Congratulations! We hope you will join us. Respond to your offer through your Mosaic portal.
